ADAM SERIES PISTOL - SERRATION PRESCRIPTION

ADAM SERIES PISTOL - TECHNICAL PRESCRIPTION

- Hot Forging Method Lower

For
Operation
Video

If the raw materials of our pistols and the **Frame (Receiver)** are Forged Steel. As you can see left, they are forged with molds that we specially designed by hot forging method to gain extra strength.

Thus, these **Frame (Receiver)** raw materials, which gain extra strength, are processed with our CNC machines and equipment in our company and become final. All **Frame (Receiver)** production processes and post-production controls are made with gauges.

- Hot Forging Method or Cold Forging Method Barrel

The raw materials of our pistols **Barrels** as parts are produced in **2 different** types as you can see above.

a. As the first method, as you can see left, with the Hot Forging method, we designed our own. It is ensured that the raw material gains extra strength by forging with molds. After this method, the inside of the barrel is drilled with the deep hole drilling method within our company, the groove-set drawing processes are completed, and it is finalized by processing with our CNC machines and equipment.

b. Cold Forging method is applied as the second method. For this method, before the material is forged, the inside of the barrel is drilled with the deep hole drilling method and the outer form is prepared with our CNC machines so that it is ready for the Cold Forging operation. In the Cold Forging operation, groove-set is drawn, the barrels are forged to lengthen and gain extra strength. After the Cold Forging operation, the desired paint is cut and processed with our CNC machines and equipment and finalized.

For
Operation
Video

- Hot Forging Method Slide

For
Operation
Video

The raw materials of our Pistols **Slides** we produce as parts are as you can see left, extra strength is gained by forging with molds that we specially designed with the hot forging method.

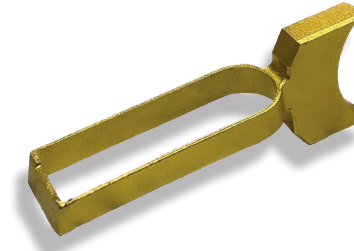

Thus, these **Slides** raw materials, which gain extra strength, are processed with our CNC machines and equipment in our company and become final.

Production processes and post-production controls of all **Slides** are made with gauges.

ADAM SERIES PISTOL - TECHNICAL PRESCRIPTION

- Monoblock Trigger Set

While most manufactures construct the trigger bow and shoe separately, **BALISTIK DEFENCE** fabricates both as a single unit of steel which we term a **Monoblock Trigger**.

Although this costs us more, we know it is higher quality because it eliminates human error in fitting the bow to the shoe.

ADAM SERIES - .45ACP TECHNICAL PRESCRIPTION

Caliber	: .45ACP	Length	: 8.46" Inc / 215mm
Type	: Pistol	Height	: 5.8" Inc / 147mm

BOLT ACTION RIFLE COLLECTION

COSMOS

COSMOS

COSMOS provides customisation to its user with its adjustable stock and ergonomically designed fore-end and changable precision/weight in single stage trigger which is in MIL SPEC standards. Trigger weight can be adjusted between 600gr and 1500 gr and trigger itself can be positioned in three axis.

The magazine of COSMOS is a polymer and metal magazine in MILC SPEC standards. Capacity is designed as 5+1 and 10+1.

Standard barrel length is 24"/61 cm. Rifle inside of the barrel is made by two diferent methods such as Broach and Button. There is a 22mm OMDA piccatiny rail on the body and also a long piccatiny under the stock. The piccatiny rail on the body is fixed on the body with four screws, it can be adjusted.

TECHNICAL PRESCRIPTION
